

# CCBC Update, November 12, 2025

## We are making progress!

Work on the Lincoln Community Center is progressing fast. Our General Contractor, Hutter Construction is building the foundations using rammed aggregate piers

- This week, crews are completing pier installation and preparing for footing excavation, pending final testing results.
- Excavation will continue into the week of 11/17/25, with footing installation beginning shortly thereafter.
- By late November, the foundation work will progress as footings are set, and the first walls begin to rise.
- Moving into early December, crews will continue building out the foundation with additional footings and walls, further shaping the structure.

The next CCBC meetings is scheduled for **November 19, 2025** (Donaldson Room and virtual). We welcome your comments, and questions. Please see the CCBC web site for full information
